

Regular Maintenance, Deep Cleaning and the Use of Disinfectants on Milliken LVT Products

You've entrusted Milliken as your flooring supplier, and we're here to support you not only as you get your facilities back up and running, but also in how you maintain those facilities long-term. We've created the following recommendations pertaining to regular maintenance, deep cleaning and the use of disinfectants on Milliken Floor Covering products within your facilities.

For concerns related to COVID-19 please visit the Centers for Disease Control and Prevention (CDC) [webpage](#) regarding 'Cleaning and Disinfection for Community Facilities.' This webpage also provides CDC recommendations on the cleaning and disinfection of rooms or areas occupied by those with suspected or confirmed COVID-19 and provides specific information related to hard (Non-porous) surfaces such as our LVT products.

According to the CDC guidelines, hard (Non-porous) surfaces such as our LVT products should be cleaned before using disinfecting products. Please reference our [LVT maintenance](#) instructions for recommendations on regular maintenance and deep cleaning guidelines. Once cleaned, the CDC recommends using [EPA-approved](#) disinfectants for your space.

All chemical categories on the [EPA-approved](#) disinfectant list are approved for use on Milliken LVT products.

Special care should be taken to properly follow application method, dilution, dwell time and cleaning instructions per the disinfectant manufacturer's user manual and equipment manufacturer user manual depending on how the disinfectant will be applied. Always remove residual disinfectants once they have been applied per the disinfectant manufacturer's user manual.

Please contact the Milliken Technical Services team for more information regarding specific cleaning procedures and application of disinfectants on Milliken Floor Covering products (1-800-528-8453, option 2).
