

LET YOUR MOISTURE WORRIES EVAPORATE.

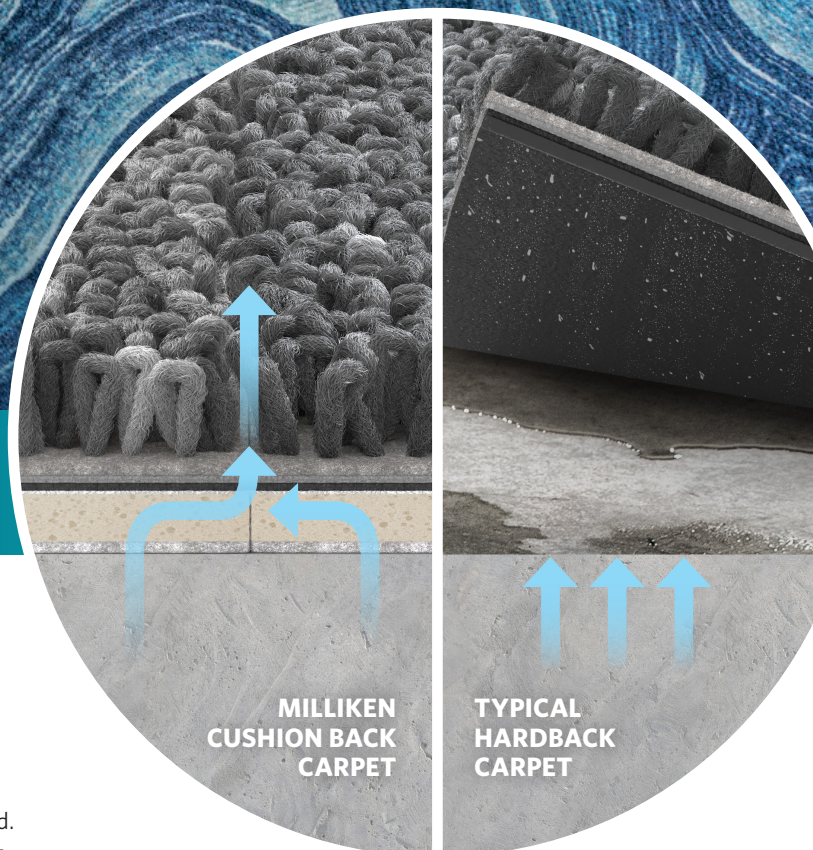

MOISTURE ISSUES IN SLABS CAN COST
UP TO 30% EXTRA.

Our carpet flooring can save you time and money, and here's why.

When renovating a building, moisture issues could be problematic especially for on-ground or below-ground floor of a building, but when you choose Milliken product, you can rest assured we've got you covered. Removing old adhesive could be another costly experience, which can be avoided with our Non-Reactive adhesive.

Our WellBAC® Comfort and Comfort Plus carpet comes with open-cell, cushion backing as a standard. It is designed to allow floors to breathe and moisture to evaporate when used in combination with our Non-Reactive Standard (NRS) adhesive.

Milliken.

MILLIKEN
CUSHION BACK
CARPET

TYPICAL
HARDBACK
CARPET

With Milliken carpet, moisture vapour can travel freely through our open-cell cushion backing, venting naturally from the seams. Hardback carpet often traps moisture vapour, causing water condensation to form underneath the tiles.

See Installation Instructions and Product Warranty for more details.

Renovation without aggravation

When your subfloor is substandard, our flooring's got you covered.

Install Milliken carpet tile without costly moisture mitigation.

No need to apply floor surface primer.

Carpet tile can be installed over old adhesives.

WellBAC® open-cell carpet backing allows floors to breathe and moisture to evaporate.
