CAPTURE® & Approval by Vacuum Cleaner Manufacturers

Capture has been sold commercially for approximately 20 years, and used by millions of people since then. Real world experience, as well as our own laboratory testing, shows that Capture products are safe for use with vacuum cleaners.

Our retail marketing of Capture includes distribution of the product in packages with standard consumer vacuum cleaners that are manufactured by Hoover, Kenmore, Panasonic, Fantom, Royal and Oreck. Advertisements used by JC Penny, Fingerhut, Spiegel, K-Mart and Sears have stated that "Capture is safe to use with your home vacuum cleaner." Therefore, we do not require that a special vacuum cleaner be used when cleaning with Capture.

Our testing has confirmed that Capture can be used with HEPA filter systems but we do not recommend or require that type of filter be used. If an individual needs to use a HEPA filter with their vacuum system for health reasons then we can confirm that Capture is compatible with those filters.

Capture products have been tested with models from a range of manufacturers such as those above. This testing, performed by Milliken for Sears, shows that Capture Carpet Dry Cleaner is not detrimental to vacuums maintained in proper operating condition. If you feel your vacuum may not be operating properly after use of Capture, we would suggest a thorough inspection of all hoses, seals, connections, filters and filter bags to determine whether they are properly installed and functioning properly. Problems in any of these areas can result in the entry of foreign material into the motor. This is likely to be damaging, no matter what is being vacuumed. For these reasons, we feel that Capture products are safe to use with your home vacuum under normal use.
