ON-LINE VISUALISER

Our on-line visualisation technology allows clients to make informed decisions by taking the guesswork out of floor design.

Our easy to access on-line Visualiser tool provides a library of high-quality 3D room scenes, in varying room types and styles, that enables clients to interact with the product, experiment with different carpet and LVT layout combinations and visualise their preferred choices.

The MY ROOM feature allows clients to upload an image of their own interior space and render their chosen floorcovering alternatives into that space.

HIGH RESOLUTION TILE IMAGES

High resolution images of all the carpet and LVT tiles and planks in our standard product Portfolio can be downloaded from our website.

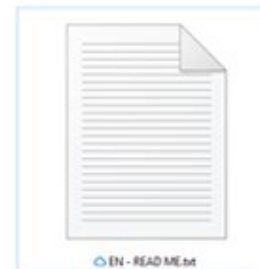

These images are offered in single tile/plank format or as 4m x 4m layouts. These downloads can then be used in your own Visualisation projects.

HIGH RESOLUTION ROOM SCENES

Our VisionLab team can provide floor covering design advice and offer hands-on collaboration with your design team.

They can present different floor covering design ideas and then help you visualise those concepts by providing high resolution room scenes, using either a room from our VisionLab image library or a photograph or render of your own space.

RENDERED FLOOR PLANS

Rendered VisionLab Floor Plans allow a client's design concepts to be viewed within a detailed 2D floor plan before a purchase decision is made. Where a project has existing architectural floor plans our VisionLab team can upload these into our system, or we can generate floor plans based on similar spaces.

Our Rendered Floor Plans provide detailed product details and specification information as well as showing suggested installation methods, zoning areas and pattern match. This helps to ensure accuracy at the point of final installation.

SEAMING DIAGRAMS

VisionLab Seaming Diagrams complement Rendered Floor Plans and are supplied in a detailed 2D carpet layout .

While floor plans provide an overview of how a carpet design will look from a bird's eye perspective, seaming diagrams go one step further and provide exact placement of carpet tiles on the floor plane and an estimation of product requirements.

Labelled and colour coded areas indicate each carpet tile depicted on the diagrams, with directional arrows indicating carpet installation. The finished Seaming Diagram will be supplied with full product details and installation methods.
